heryanshah.vercel.app

Kota Kinabalu, Sabah

EDUCATIONAL BACKGROUND

Bachelor of Computer Science (Data Science) with Honours	Oct 2022-Dec 2026
Universiti Malaysia Sabah	

Diploma in Electronic Engineering (Computer)	Jun 2018-Sep 2021
Politeknik Kota Kinabalu	

WORKING EXPERIENCE

U-Science Full-Stack Developer Intern	Mar 2026-Present
--	-------------------------

- Architected and deployed the USC-X centralized management platform utilizing the MERN stack and Vercel, digitizing operational workflows by replacing legacy Excel-based data entry and manual facility booking processes with streamlined web modules.
- Developed a dynamic, responsive landing page to replace the previously hardcoded UMS portal site, integrating a custom Content Management System (CMS) within USCX that empowers non-technical staff to independently update website content, images, and facility descriptions.
- Engineered comprehensive Power BI dashboards to synthesize the U-Science STEM dataset, performing deep-dive analysis on a year’s worth of raw data to identify long-term participation trends and program impact.
- Designed and delivered technical curricula for in-reach and outreach programs, facilitating hands-on workshops and talks in IT-related courses, Arduino, AI, Programming, and IoT to promote digital literacy and STEM engagement within the community.

Smart Native Maker STEM Educator (Freelance)	Apr 2026-Present
---	-------------------------

- Instructed weekend STEM programs, mentoring young learners through practical exercises to promote early digital literacy and interest in technology (Arduino, TinkerCAD, Scratch, Pictoblox and Machine Learning).
- Authored custom educational content and hands-on activities tailored to diverse learning paces, significantly improving student engagement and comprehension.

Prima IT IT Tech Intern	Mar 2021-Jul 2021
----------------------------------	--------------------------

- Diagnosed and repaired a wide range of customer devices, including laptops, desktops, and peripherals, ensuring high-quality technical solutions and restoring device functionality.
- Resolved over 15+ hardware and software issues weekly, ranging from system crashes to component replacements, consistently meeting quick turnaround times to maintain high customer satisfaction
- Performed system optimizations and OS deployments for client machines, improving device performance and ensuring the latest security patches were successfully installed.
- Provided technical consultations to customers, explaining complex hardware issues in accessible terms and recommending cost-effective repair or upgrade solutions.

SKILLS

- **Software & Technical Skills:** Python (NLP, Machine Learning), JavaScript (MERN Stack), C++, HTML5/CSS3, Java, SQL, R.
- **Data & AI:** Microsoft Excel, Power BI (DAX, Visualization), Computer Vision (OpenCV), Sentiment Analysis, H5 Models.
- **Tools & Hardware:** MongoDB, Node.js, Express, React, Raspberry Pi Deployment, GitHub, Render, Vercel, Streamlit.
- **IT Operations:** Hardware Troubleshooting, System Maintenance, OS Deployment, Data Automation.

CERTIFICATIONS AND LICENSES

- | | |
|---|------|
| • Google IT Support Professional Certificate , Coursera (Google) | 2022 |
| • Excel Skills for Data Analytics and Visualization , Coursera (Macquarie University) | 2022 |
| • Six Sigma DMAIC (Green Belt) , Universiti Malaysia Pahang (UMP) | 2021 |
| • Level 1 Electrical Installation & CIDB Green Card , Construction Industry Development Board Malaysia | 2020 |

PROJECT INVOLVEMENT

Enhancing Product Review Sentiment Analysis via Emotion Feature Integration (Degree Final Year Project) 2026

- Trained a Deep Learning model (H5) using Keras/TensorFlow to enhance sentiment analysis by integrating nuanced emotion features from product review datasets.
- Engineered an NLP pipeline and deployed an interactive Streamlit web app integrated with Grok LLM API to perform real-time summarization of consumer sentiment trends and emotional triggers.

Smart Condominium Security Solution (Idea Competition - Finalist) 2025

- Conceptualized an IoT-based security framework to mitigate "piggybacking" at high-rise towers, integrating real-time sensors and proactive alert systems.

MatchKami Bot (JomHack Varsity Challenge 2025 - Hackathon) 2025

- Architected 'MatchKami,' an AI-driven Telegram bot leveraging sophisticated matching algorithms and Telegram APIs to connect underprivileged schools with NGOs, achieving 1st Runner-Up in a competitive hackathon.
- Led technical development within a multidisciplinary team (Team Titans) to build a functional MVP under high-pressure hackathon conditions, winning 1st Runner-Up.

U-Science X: U-Science Web and Centralized Data Management System (U-Science Internship Project) 2026

- Architected and developed a comprehensive centralized management system using the MERN stack (MongoDB, Express, React, Node.js) to streamline event statistics, program feedback, and facility/asset bookings.
- Engineered an automated visitor counting and data collection module utilizing IoT with a Raspberry Pi and OpenCV.
- Developed a dynamic, public-facing landing page, featuring a custom Content Management System (CMS) that empowers staff to easily update content and significantly improves public accessibility to U-Science programs.
- Designed and integrated live interactive dashboards utilizing Power BI to visualize real-time database metrics and provide actionable insights.

IoT Smart Garden using ESP32 and Blynk Platform (Diploma Final Year Project) 2020

- Engineered an automated smart gardening system utilizing an ESP32 microcontroller to interface with environmental sensors (such as soil moisture and temperature) and trigger automated irrigation mechanisms.
- Integrated the Blynk IoT platform to develop a real-time mobile dashboard, enabling seamless remote monitoring of plant health metrics and providing manual override controls for efficient water management.

EXTRACURRICULAR INVOLVEMENT

Persatuan Mahasiswa Fakulti Komputeran dan Informatik (Kampus Kota Kinabalu)

Oct 2022 – Sep 2024

- Academic and Career Exco (2023/2024), Organized and facilitated technical workshops, academic seminars, and career-focused events to bridge the gap between computing students and the tech industry.
- Media and Publicity Exco (2022/2023), Designed and distributed digital marketing materials, including posters and promotional videos, to drive student engagement and attendance for faculty programs.

IT Exploration 2025: Technology and Community Program (Lead Organizer)

2025

- Led a committee to organize and execute technical workshops, including Arduino and mBot robotics training, and a professional IT forum for the community. Managed technical curricula and resource allocation for multiple concurrent sessions, ensuring seamless delivery and high participant engagement during STEM outreach.

Borneo Hackathon 2024 (Deputy Director)

2024

- Directed the registration process and secretariat operations, serving as the primary liaison to resolve all participant inquiries and ensure seamless event onboarding.
- Managed event logistics and resource allocation, including the coordination of technical equipment and documentation required for mass certificate printing.
- Authored and designed the comprehensive event program books and information booklets to guide participants through the competition schedules and guidelines.
- Oversaw the welfare, catering, and daily operations for all participants and organizing committee members, ensuring a smooth and supportive environment throughout the hackathon.

Borneo Hackathon 2023 (Commitee)

2023

- Facilitated the registration process and secretariat operations, assisting with participant inquiries to ensure smooth onboarding.
- Provided comprehensive on-site IT support throughout the event, actively troubleshooting network connectivity, software, and hardware issues for all competing teams.
- Managed the setup and operation of audio-visual equipment and technical infrastructure required for presentations, mentoring sessions, and the final pitching events.

Kembara Sains Borneo 2024 (Facilitator)

2024

- Conducted hands-on technical workshops focused on Arduino microcontrollers and Scratch programming, introducing students to foundational coding and basic electronics.
- Served as a Science Communicator for STEM exhibitions, effectively translating complex scientific and technical concepts into engaging, accessible demonstrations for public attendees.

STEM Series Speaker: How Computer Know Our Emotion?

2026

- Delivered an engaging technical lecture on Artificial Intelligence and emotion recognition to 186 students at SK Kampung Keningau.
- Acted as the primary instructor, breaking down advanced concepts like computer vision and sentiment analysis into accessible, interactive learning materials for a primary school audience.
- Fostered student interest in emerging technologies through clear, engaging communication and dynamic presentation skills.
